Education

National University of Singapore <i>Bachelor of Engineering in Computer Engineering</i>	Aug 2024 - present
Eunoia Junior College	Jan 2020 – Dec 2021
Catholic High School	Jan 2016 – Dec 2019

Experience

A*STAR Advanced Remanufacturing and Technology Centre <i>AI Research Engineer</i> Developed and evaluated context-aware, user-centric capabilities within a multi-agent AI platform, focusing on adaptive intelligence and intelligent agent coordination.	Feb 2026 - Present
GoldJewel Pte. Ltd. <i>Software Engineer</i> Built and deployed a modern jewellery website with a custom CMS, featuring real-time updates, intuitive product management, image cropping, intuitive homepage and interfaces, and mobile optimization.	Jun 2025 – Aug 2025
Oxley Pawnshop <i>Software Engineer</i> Designed and launched a modern website for a Singapore pawnshop as a solo intern, featuring email-integrated contact form with automated replies, real-time gold price updates, and configured company email accounts.	May 2025 – Jun 2025
Yoga Movement <i>Front Desk & Data Analyst</i> Analysed participation trends to improve class scheduling and engagement, and provided customer support while fostering a positive and welcoming environment.	Dec 2023 - Present
Singapore Armed Forces <i>National Service – Signal Specialist in 10C4I Battalion</i>	Jan 2022 – Nov 2023

Projects

Hack&Roll 2026 <i>Machine Learning, Fullstack Development</i> Part of a team that built an AI-powered desktop assistant that uses GPT-4o vision to capture and analyse the user's screen, providing real-time step-by-step guidance for any software with automatic step-completion detection.	Jan 2026
NUS Fintech Summit 2026 <i>Fullstack Development</i> Part of a team that built a payments platform on the XRP Ledger, unifying instant transfers, escrow, asset tokenization, and RLUSD stablecoin integration with on-chain DID identity verification for compliance.	Jan 2026
PSA Code Sprint (3rd Runner Up out of 400+ teams, Best Team for Theme 2) <i>Machine Learning, Fullstack Development</i> Part of a team of 4 that developed an AI diagnostic assistant with ticket management for PSA, automating Level 2 support by analysing alerts, correlating evidence, and generating root-cause insights.	Oct 2025
SUTD What the Hack <i>Fullstack development</i> Part of a team of 5 to build a web-app platform for seniors, featuring real-time interactive AI avatar companionship, hobby discovery hub, and a safe social media network, to enhance mental health, life fulfilment and connectivity.	Sep 2025
SentinelAI (Submission for NUS SoC VIP Grant & IDP IDEATE Hackathon) <i>Machine Learning, Fullstack Development</i> - Part of a team of 5 to develop an AI-powered system that transforms IP cameras into real-time anomaly detectors for falls, emergencies, and safety hazards, with use cases in elderly care, pet monitoring, and industrial safety. - While our project didn't advance, we reflected on scalability, long-term differentiation, and safety challenges. We noted overlaps with existing solutions, deriving strategic insights on innovation focus, product-market fit and long-term sustainability.	Aug 2025 – Sep 2025
NUS Lifehack (Finalist – Top 10 of 60+ teams, Most Impressive Usage of Data, Best Team for Theme 1) <i>Mobile App Development</i>	July 2025

- Part of a team of 5 to build an AI-powered app that integrates real-time Singapore health data, GPT-based health guidance, and community reporting to create a crowdsourced public health monitoring and education platform.

DSTA BrainHack CODE_EXP (*Finalist – Top 20 of 80+ teams*)

June 2025

Mobile App Development

- Part of a team of 5 to develop an AI-powered mobile app that helps users detect, understand, and prevent online scams. It offers real-time URL analysis, educational content, scam analytics, and a community forum.

NUS Orbital 2025

May 2025 – Aug 2025

Mobile App Development

- Co-developed a cross-platform fitness app featuring real-time workout tracking, YouTube integration, science-based calorie calculations, social networking, analytics, muscle recovery modelling, and personalized recommendations.

GeeksHacking Hackomania (Interledger: Quitting Addiction Together)

Feb 2025

Web App Development

- Part of a team of five in building a full-stack web application for a donation-based support platform enabling micro-donations through the integration of Open Payments API to assist individuals overcoming addiction with motivation.

SMF & NUS Maritime Hackathon (*Called for Top 3, final rank undetermined*)

Jan 2025

Machine Learning

- Part of a team of four that developed a machine learning model classifying ship repair severity from textual annotations, achieving over 90% accuracy on a dataset of 10,000+ ship records.

Clubs & Societies

NUS Google Developer Club

Aug 2025 - Present

Associate

- Drove community growth at NUS Developer Group by leading events, workshops and hackathons that empower students to learn, share and build together

Technical Skills

- **Programming Languages:** Proficient in C and C++, Java and Python with hands-on experience in software development, data structures, and algorithm implementation
- **Embedded Systems & Digital Design:** Experienced in embedded programming on Arduino and Raspberry Pi; proficient in FPGA design and development using Vivado
- **Networking & Communication Protocols:** Familiar with network protocols and data interfacing principles
- **Circuit Analysis & Sensor Calibration:** Strong foundation in AC/DC circuit analysis and sensor integration and calibration
- **CAD & Design Tools:** Competent in using AutoCAD Fusion for design and prototyping
- **Data Analysis:** Skilled in using Excel and Radiant for data cleaning, visualization, and exploratory analysis
- **Cisco Certified Network Associate (CCNA):** Earned during tenure as a Signal Specialist; demonstrates foundational knowledge in the installation, operation, and verification of Cisco networks and core networking concepts
